DETAILED ACTION

Election/Restrictions

Claims 33 and 34 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 04/25/2008.

The following is a second election/restriction requirement:

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form **a single general inventive concept** under PCT Rule 13.1.

The species are as follows:

- I. A micro structured gas sensor.
- II. A micro structured acceleration sensor.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added

Art Unit: 2855

after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner: Claims 22 and 23 relate to a gas sensor. Claim 24 relates to an acceleration sensor. The following claims are generic: 19-21, 25-32, 35, and 36.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Group I requires a transparent cap chip that allows for the measurement of infrared radiation and that the measurement areas are formed to detect wavelengths. **Group II** does not comprise these special technical features. **Group II** requires that the measurement areas are formed to detect inertial movements and that one measurement area serves as a reference. **Group I** does not require these special technical features. The two groups lack a general inventive concept because they operate in a completely different manner (Group I senses electromagnetic energy, while Group II senses physical phenomena), include different structural elements and design in the final form of the apparatus, and have separate industrial applicability.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 2855

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
